

AUSTIN SONNY STETHEM

Pricing & Master Data · Analytics · Project Delivery

Hartley, Iowa (relocating to Minneapolis–Saint Paul) · 712-299-5267 · austinstethem1976@gmail.com

austin-stethem.github.io · linkedin.com/in/austin-stethem

Pricing and master data analyst who delivers the systems as well as the analysis. Root-level authority over enterprise pricing across an 80-branch, 8-state network: 1M+ SKUs, 565+ manufacturer lines, roughly 27,000 B2B accounts. Five years scoping what a system must calculate, writing the spec, validating it with the six departments that consume the output, and driving it to production.

CORE COMPETENCIES

Delivery: Requirements gathering, functional specification, current- vs future-state mapping, UAT, stakeholder alignment, rollout sequencing, change management, backlog and roadmap governance

Pricing: Tiered margins, KVI cross-subsidization, price waterfalls, activity-based costing, TCO, cost pass-through, margin defense

Master Data: AutoCare ACES/PIES, PCdb/VCdb, SKU lifecycle and supersession chaining, Hazmat and regulatory compliance, ERP governance

Technical: SQL, Python (pandas, NumPy, scikit-learn, GeoPandas, Flask), JavaScript (Leaflet, Chart.js), Phocas BI, Excel Power Query

EXPERIENCE

Arnold Motor Supply (Merrill Company) — Spencer, Iowa

Pricing & Master Data Analyst October 2021 – Present

Pricing Strategy & Margin Defense

- **Price dispersion audit:** pulled twelve months of transaction history on a high-volume part and found 400+ distinct transacted prices against an eight-tier ladder designed to produce eight — a 104% spread between the lowest and highest price paid for an identical item. No existing report surfaced it; wrote the report that now surfaces it.
- **Margin risk modeling:** developed a Python Monte Carlo simulation forecasting supply chain margin risk, modeling landed-cost volatility across utility overhead, freight routes, and ABC velocity tiers. Approved by the Lead Managing Partner.
- **Variance & cost pass-through:** model P&L impact of supplier cost movements to set pass-through percentages before ERP deployment; execute emergency repricing on off-hours rollouts during tariff shocks.
- **Diagnostics & bid support:** stratified sampling across KVIs and low-velocity SKUs in Phocas BI to target price optimizations; model competitive pricing for state, municipal and commercial fleet RFPs.

Delivery & Project Execution

- **Discovery & requirements:** run discovery sessions with department heads across accounting, sales, IT, logistics and product; map current-state against future-state and produce a spec naming the decision, the consumer of the output, and the cost of getting it wrong.
- **Specification to sign-off:** coordinate with developers through build and validation, confirming pricing logic, matrices and routing rules meet business requirements before securing UAT sign-off.
- **Rollout & adoption:** manage deployment of pricing and data infrastructure across 80 branches, sequencing releases around branch operating hours so quoting and shipping keep running; support adoption through targeted training and post-launch response.
- **Portfolio & roadmap:** fifteen analytics builds delivered against a tracked backlog, with remaining work specified and prioritized rather than left implicit.
- **Crisis continuity:** held pricing and data continuity from temporary satellite locations through a catastrophic 2024 regional flood; the network kept quoting and shipping while its physical center was underwater.

Systems & Master Data Governance

- **ERP authority:** one of three personnel with root-level access to audit, modify and deploy enterprise pricing across 80 branches; cleanse and map non-compliant vendor files to internal SQL schemas so mass updates deploy clean.
- **AutoCare standards:** manage PCdb/VCdb integrations across 565+ manufacturer lines, aligning ERP nomenclature to national standards for fitment accuracy and to eliminate catalog fragmentation; engineer cradle-to-grave SKU lifecycles including Hazmat coding and dimensional metrics.

ANALYTICS PORTFOLIO — austin-stethem.github.io

- Fifteen analytics case studies built on synthetic data, each with live inputs and a documented walkthrough: K-Means account tiering with derived confidence, Monte Carlo margin optimization using common random numbers, two-proportion Z-testing with power analysis, FIFO revaluation against avoided cost, competitor rooftop geocoding across 3,768 locations, and master data entity reconciliation.

EDUCATION & CERTIFICATIONS

Iowa Lakes Community College — Emmetsburg, IA

Associate of Science

Associate of Arts

W3Schools — Certified in Data Science; Certified SQL Developer
